

## **SEO Copywriting Checklist**

Use these guidelines to optimize your web content to be found in search and easily shared. This checklist helps you get maximum SEO value from each page you publish.

DURING THE WRITING PROCESS			
	Persona Did you identify the likely audience for this page, and does the page address their needs?		Required hyperlinks Is a contextual link to a relevant landing page included, with optimal anchor text?
	Primary keywords Does the page target a relevant keyword phrase or (at most) two?		Headline (H1 heading) Is the headline fine-tuned to get a click and contain a target keyword?
	Secondary and clarifying keywords Does the text contain keyword synonyms and variants as well as related secondary keyword phrases?		Short paragraphs Are paragraphs between one and three sentences long, since short paragraphs look better on mobile screens?
	Call to action (CTA) Is there a fitting call to action on the page? Lead your reader to what related action you want them to do next.		Scanability Are bullet points and subheadings used to help readers easily scan the text?
	Word count is the word count in the range of top-ranking pages for the target keywords?		Mobile-friendly writing style Does the content include conversational language, like answering questions that are commonly asked in voice searches?
BEFORE YOU HIT PUBLISH			
	Page URL Is the URL properly constructed for your site and not overly long? Does it contain hyphens in place of spaces?		Image tags Do all image tags have a descriptive alt attribute and include height and width dimensions for faster browser loading?
	Page title Does the title tag have the primary keyword? Is the wording unique (on your site), appropriate for the page content and no longer than 65–70 characters?		Open Graph title Is the text that shows up as the headline of the page when someone shares this page in social media optimized to entice a click?
	Meta description Is the meta description tag uniquely crafted to contain keywords and accurately tell searchers why they should click?		Open Graph description Is the description of the page that shows up when someone shares this page in social media optimized to entice a click?
	Images Are there images on the page that create visual interest and break up text? Are they sized to be the actual display size, not larger, to protect page-load speed?		Open Graph image Is an image that illustrates the content included in the og:image tag to entice a social media user to click through to the page?
WHEN THE PAGE IS LIVE			
	Broken links Are any broken links found when you run the URL through a link checker (such as <a href="Check My Links">Check My Links</a> )?  Readability Is the reading level right for your target audience? You can use the <a href="Single Page Analyzer">Single Page Analyzer</a> to check your page's text metrics and then adjust as needed.		Page speed Does the page load in 2 seconds or less according to a Pingdom test? Should any on-page resources be optimized to load faster?
